

A Leaky Feeder that does its own troubleshooting? **Now that's smart.**

With the installation of its 250th Smart Com Remote Diagnostics System, Varis has taken the world's mining industry to a new level of Leaky Feeder excellence. Upgrade your existing system with Smart Com 150 head end and amplifiers which can detect and report damages or breaks in the system. Order an upgrade to your system before Sept. 30th, 2009 and receive a rebate of up to \$5000. Another smart idea from Varis.
